

KUBRA

KBA TOKEN WHITEPAPER

Version 1.0 - Built on BNB Smart Chain

FUTURE. VALUE. TRUST.

Project Overview

Kubra (KBA) is a BEP-20 token deployed on BNB Smart Chain. The project is designed around transparency, on-chain verification, fixed supply economics and community-focused growth. Kubra aims to provide a reliable digital asset foundation that can be used for ecosystem participation, future services, incentives and token-based integrations.

Token Information

Token Name	Kubra
Symbol	KBA
Network	BNB Smart Chain (BEP-20)
Token Standard	BEP-20
Decimals	18
Total Supply	20,000 KBA
Circulating Supply	20,000 KBA
Additional Minting	No
Inflation Model	Fixed Supply
Max Total Supply	20,000 KBA

Contract Address

0xb51cce8ea6332f68ad7659ca2283af547f6d453d

Vision

The Kubra project is based on three core principles: future readiness, measurable value and trust through transparency. By using BNB Smart Chain, Kubra benefits from fast transactions, wide ecosystem compatibility and public contract verification.

Future

A scalable base for future integrations and ecosystem utilities.

Value

A fixed 20,000 KBA supply designed for clarity and simplicity.

Trust

Verified smart contract source code and transparent on-chain records.

Token Utility

- Community participation and future Kubra ecosystem engagement.
- Potential use in payments, access, loyalty or incentive programs developed by Kubra.
- Transparent on-chain transfers and verifiable fixed supply.
- Compatibility with BEP-20 wallets and decentralized applications on BNB Smart Chain.

Tokenomics

KBA has a fixed total supply of 20,000 tokens. The contract does not include additional minting functionality, giving the token a simple and transparent supply model. Future allocations for liquidity, community development and ecosystem activities should be communicated publicly by the project team.

Fixed Supply

20,000 KBA

Smart Contract Summary

Contract Address	0xb51cce8ea6332f68ad7659ca2283af547f6d453d
Compiler	Solidity v0.8.20
License	MIT
Source Code	Verified on BscScan
Core Functions	transfer, approve, transferFrom, allowance, balanceOf

Roadmap

1

Phase 1

Smart contract deployment, source code verification and repository setup.

2

Phase 2

Community launch, GitHub documentation, wallet visibility and BscScan profile updates.

3

Phase 3

Liquidity planning, exchange preparation and ecosystem partnerships.

4

Phase 4

Utility expansion, product integrations and long-term community development.

Disclaimer

This whitepaper is provided for informational purposes only. It does not constitute financial, investment, legal or tax advice. Readers should perform their own research before interacting with any digital asset or blockchain project.

Cryptocurrency and blockchain assets are subject to market, technical, regulatory and operational risks. The value and usability of a token may change over time, and there is no guarantee of future performance or availability.

Kubra (KBA) is presented as a transparent BEP-20 token with verified source code and fixed total supply. Future development, liquidity actions, exchange listings and ecosystem integrations may depend on community decisions, technical feasibility and external market conditions.
